

**LOSS NOW 1,000 TONS A DAY**

MORGANTOWN, Va. Sept. 7.—Many large figures and instruments in favor of a harbor at the mouth of Deekers creek were brought before a council of C. Newcomer at the bearing on the board of trade rooms yesterday morning. With Colonel Newcomer was J. F. Winslow, secretary of the Pittsburg Civil Service Board, and J. B. O. also attended the meeting.

Congressman George C. Sturges opened the argument with a number of general statements as to the wealth of the Deekers creek basin and the advantages which would be derived by the shippers from the proposed harbor. He also emphasized the peculiar situation of the Deekers creek basin in relation to the river and lake and in relation upon the steep grade leading to the Walnut street wharf.

Following the Congressman's remarks Colonel Newcomer in a few words gave the vital point in the matter from the government standpoint. The question is the attitude of the national government in providing terminal facilities. There is no question that the harbor could be utilized most favorably in connection with the Morgantown. However it is been the policy of the government to utilize public funds in this manner and for this reason principally the two previous reports have been unfavorable. Colonel Newcomer then brought up the question as to whether or not the private enterprise the Morgantown & Kingwood railroad and Decker's creek shippers should co-operate in providing the harbor. At the close of the meeting Manager Harry R. Warfield stated that if the government could provide the channel of necessary width and depth of a distance of about 100 feet the wharfage facilities would be a sured.

J B Hanford of the Elkins Coal & Coke Company, stated that there were 90 ovens along the M & K and that 6000 more would be built as soon as the market would warrant it. Charles F Sutherland gave the tonnage figures for freight shippers over the M & K for the year ending June 30th. Following is the figures: Coal 120,245 tons, coke 317,565 tons, lumber 7,000 tons, tin plate 77 tons, rough glass 4,840 tons, cement 44,410 tons.

Col E M Grant presented some of the principal arguments in favor of the harbor. According to the statement of Mr Grant, an attempt was made to purchase a large block of coal by a company now operating a private plant at Glasgow. The deal would have been consummated had there been facilities for river shipping. The coal along the M & K is among the best that can be found for the byproduct plants and the company was willing to buy a field or contract for 1000 tons of coal a day. The Jones Laughlin people have been endeavoring to secure Detroit creek number but the attempt had to be given up owing to lack of river shipping facilities.

### Tin Plate Sales Have Increased Over Last Year

PITTSBURGH Sept. 1.—(Special.)—Announcing that the strike of the Amalgamated Association of Iron Steel & Tin Workers, which had been in progress against the American Sheet & Tin Plate Company since July 10, was called off only last Sunday, the company's total shipments of sheet have gained 40 per cent as compared with the corresponding period of last year. The company is operating 75 per cent of its sheet mill capacity.

Operations are proceeding in 1910 at 80 to 84 per cent of the entire serviceable capacity of 250 in mills of the company as compared to 71 in 1909 and 5 per cent at this time in 1907. Total shipments of tin plate show a decline of \$400,000 as compared with the same period in 1909 and a decline of 10 per cent of the output of the American Sheet & Tin Plate Company. The company's sales of tin plate in 1909 were \$1,000,000, while in 1910 they were \$900,000.

At the same time, the company's sales of tin plate in 1909 were \$1,000,000, while in 1910 they were \$900,000.

The Federal Oil & Gas Company of this city has purchased all the properties of the Georgia Bell Oil Company of Muskogee, Okla. and the Woods Oil Company of Tulsa, Okla., paying \$500 for the former and \$207,000 for the latter. The local men closed negotiations for the properties yesterday. It gives to Federal Oil & Gas Company of Pittsburg, least and producing wells in the Muskogee, Haskell and Edd Oil fields.

**Granted Letters**  
Letters of administration were issued in Uniontown today to Alonzo C. Hagan in the estate of Eli L. Brownfield, late of South Union township.

With Their Owners, Address and Ovens in Blast Corrected to  
Saturday, Sep 3, 1910.

## THE PRESIDENT

### AN ARDENT CONSERVATIONIST

The doctrine of Conservation originated by President Roosevelt will be developed by President Taft. It seems destined to become a fixed national policy and none too soon in spite of the open opposition of State Righters and the covert snubs of an unfaithful member of President Taft's official family.

President Taft's endorsement of Conservation is unqualified and emphatic. He is out in the open, declaring that he regards in this doctrine, from its inception, and gives us the assurance that he proposes to perpetuate and promote the possession by every means at his command.

His address gives evidence of a careful study of the problem and in parts some interesting facts concerning the extent and value of government lands. The Federal Government owns one-fourth of all the timber lands of the country. It could seem that this is a good basis for timber conservation and so it would be if the lands were sufficient to meet the needs of the country but they are not and the full measure of timber supplies must be had through the private and earnest cooperation of the State authorities and the private owner.

Only 6% of the private timber lands are treated according to the rules of modern forestry and are subject to destructive waste and neglect. President Taft states that it will be the policy of his administration to return government control of all oil and gas and coal lands and to open them up only under 100-year leases of 20 to 50 years with the right to continue use forbidding their transfer without the consent of the government authorities this for the purpose of preventing combinations and monopolies. He would restrict the lease of coal to 100 years. Upwards of one hundred millions of acres of land have been withdrawn by the government (reclaiming, examinations to be held) has been found under some ten millions of acres of this land and the value of the coal estimated at \$1,487,717. The coal supply of the United States is estimated to be worth \$3,000,000,000, a third of which is owned by the government. All this alone contains 1,000 square miles of coal territory and its development under a plan proposed is favorable by the President for the purpose of giving the Pacific Coast cheaper fuel.

President Taft's Conservation policy includes control of water power to the end that there shall be no monopoly there and no extension of charges.

So far from antagonizing the doctrine of State Rights in its relation to Conservation, the President's words in the reconstruction and the fact that the State authorities for as substance in the good work. Without such is since a full measure of national wealth from the Conservation policy will never be realized.

## SAFEGUARDING

### AGAINST PANIC

The decision of the Treasury Department concerning commercial paper against which emergency currency may be issued in times of practical danger of another money panic, which shook the financial world from center to circumference in 1906 and 1907. It is estimated that the banks of the country will be able under this official operation of the law to issue in times of stress something like \$500,000,000 of emergency currency which amount will be quite sufficient to counteract the panic-bred effects of the many time-honored financial distress withdrawal of money from the banks and board of directors.

There are no political indications of any necessity to the employment of this tender resort but it is comforting to know that the country has such ample protection against the toll of its people.

## INSURGENTS

### AND PROGRESSIVES

Colonel Roosevelt declares that he is not an insurgent but a Progressive. An insurgent is one in rebellion against the government of the party while a Progressive is one who seeks to improve without doing away with the existing order of things.

An insurgent is a rebel outside the Republican ranks and a Progressive is a reformer within the ranks. One goes to war with the old order to build better and stronger.

We assume that Colonel Roosevelt agrees with President Taft that the Republican Congress is composed of insurgents and Progressives is better than a Democratic Congress composed of Democrats and Insurgents. Every honest Republican feels the same way.

## CAPITAL TRUSTS

### AND LABOR TRUSTS

The proposed abolition of the coal operators of the Greensburg and Irwin districts to end the long and arduous and expensive strike in that territory is planned upon powerful and lawful lines, but in its practical application it presents some new features of the law regarding unlawful combinations in restraint of trade.

The courts have hitherto been employed in bringing to book certain large corporations commonly but in accurately called trusts for alleged infractions of the law consisting chiefly of abominations of other corporations and partial eliminations of competition. The coal companies of the Greensburg and Irwin districts propose to apply the same principle to what they allege is a labor trust.

These unions are confessedly combinations of labor for the purpose of eliminating competition and thereby securing to their members the largest possible wages just as some combinations employing capital have minimized competition and added to the prices of their products as much as the market would bear. The chief difference between the Capital Trust and the Labor Trust is that the former controls the market more particularly by competition by the regulation of production to consumption and by the elimination of middlemen's profits while the Labor Trust keeps its members in line by the strong arm when persuasion fails. The mining districts mentioned have had a number of examples of this terrorism which is common to the operation of Labor Trusts during strikes. A number of houses have been dynamited, some of the miners who persisted in working have been killed and others badly injured.

Thus when strike competition and levy oppressive taxes upon the people or in other words more than reasonable profits should be permitted. The Government has for some years past been actively engaged in an endeavor to end Capital Trusts and to compel them to be fair to the public. The labor trusts once so arrogant have been wholly subdued. The shipper who thinks he is discriminated against has never recourse before an impartial tribunal. The industrial combinations have not arrived at the stage when any one of them controls the business of the country in any particular line. The Standard Oil Company probably more than any other combines in the world is now under the microscope of operators. The United States Steel Corporation does not make half the steel and iron production of the country but it has been a dominant factor in the regulation of prices and it must be said for this corporation that its policy has been to hold prices steady at reasonable levels and to pay the best wages to its workmen.

Combinations of capital have produced the growth and progress of this country in a manner which would not have been dreamed of under a free iron rule forbidding such combinations and limiting industrial expansion to individual effort. Without combinations the world would still be roaming the Great Plains and the Indian would still hold sway in the vast empire of the Middle West.

Combinations of labor have made the world richer and the world more comfortable. The hours of toil have been reduced and the standard of living has been elevated in the hands of the American people.

It is evident therefore that such combinations of capital and labor are not only good for the people but they will be best preserved by public action. It is the duty of the government to protect them from the attacks of foolishly shouting, when by denouncing what is beneficial in their and hindering what is harmful by compelling them at all times to be fair to the public and to recognize and respect the rights of others. It is the duty of the government to protect them from the attacks of foolishly shouting, when by denouncing what is beneficial in their and hindering what is harmful by compelling them at all times to be fair to the public and to recognize and respect the rights of others. It is the duty of the government to protect them from the attacks of foolishly shouting, when by denouncing what is beneficial in their and hindering what is harmful by compelling them at all times to be fair to the public and to recognize and respect the rights of others.

## THE NEW DIRECTOR

### OF THE BUREAU OF MINES

The appointment of Dr. Joseph August Holmes as Chief of the Bureau of Mines will be received with satisfaction by the representatives of all branches of the coal mining industry in the United States.

Dr. Holmes is the logical candidate for this position by reason of his connection with the Geological Division of the United States Geological Survey and his work in connection with the Pittsburgh, Tenn. Station. He was prominent in promoting the mine and promoting the Bureau of Mines position and in shaping the bill under which it was created by the Congress. His experience and technical education he is admirably well qualified to fill the position. Hence his almost unanimous endorsement by the mining interests of the country and the general public with which his name is associated by Senators and Congressmen.

The opposition to Doctor Holmes came from within the Department of the Interior and was created and fostered chiefly by the rivalry of other ambitions. These antagonistic forces are the endeavor of Secretary Ballinger and his active opposition was the moving cause which held up the appointment so long.

The President, however, seems to have weighed the matter carefully and to have arrived at his decision conscientiously and it is the conviction of a majority of mining circles that he will have no cause to regret his having placed Doctor Holmes at the head of the Bureau of Mines.

## THE FOREIGNER

### IS CATCHING ON

In Conneltsville the coal region interest is becoming one of modern American litigation. The plaintiff and defendant in this case are the coal companies and the labor unions.

## WESTERN MARYLAND

### PLANS AND OUR PROSPECTS

The Western Marylanders precise some through Conneltsville and its connections and extensions and the idea of local interest and much spoken of in this paper, but all will be clear in due time.

The route through Conneltsville is shaping itself and it develops the fact that there is an earnest desire on the part of the Western Maryland and the Lake Erie to locate a passenger station as near to the center of the town as possible. The managers of the two railroads appreciate the fact that will be a through line to Baltimore on the south and direct connections with New York and New England in the north and west, they are in a position to make a line at Conneltsville and they propose to go after it.

The Uniontown Herald is obliged to reluctantly confess that the Western Maryland terminal will be in Conneltsville and not in Uniontown but it wants to be that the Western Maryland will build an extension into Uniontown and thence to the Monongahela river to connect with the Lake Erie. This is possible but it is more probable that the Lake Erie will build to the Western Maryland. The Herald is a great grammatical expert but its knowledge of railroad matters is evidently quite limited. It forgets that it is building the Western Maryland into Lake Erie territory or at least into the region of it. The Community Western Maryland company is pushing its construction as earnestly as possible. It evidently has a just appreciation of the value of its Conneltsville connection. It is already preparing to let the contract for ballast and rail requirements amounting to over a million dollars. Other large railroad systems are also interested in the matter. The Reading Railroad for example is preparing to connect with the Western Maryland in Franklin county with a view to making extensive exchanges of traffic.

The Western Maryland will open up the Conneltsville district wider than ever add to the advantages of Conneltsville as a manufacturing site and promote its growth especially if the Chamber of Commerce keeps actively on the job.

## THE KAPITIN KIDDO

### OF FAYETTE JOURNALISM

The Uniontown Herald is persistently cautious. It can't tell the truth about its friends and it won't tell the truth about its foes. It is devoid of any sense of common decency. It either garbles the language of its contemporaries or puts words into their mouths for the sole purpose of successfully contradicting them. It sets up men of straw to knock them down. When it meets a man it dodges. It is the Kapitn Kiddo of Fayette journalism.

The Uniontown Herald is a political communique with T. Roosevelt and it is a piece of advice to the Western Maryland concerning the proper location of its railroad are only samples of its incoherent conceit. Here is a couple of evidences of its inability to distinguish and without further present other people and other communities.

## THE GREENSBURG IRWIN CONSPIRACY CASES

The litigation over the long drawn out strike of the coal miners of the Greensburg and Irwin districts promises to develop some new and interesting features of labor unionism and operative antagonism.

The charge that the former is guilty of the Sherman law violation is a new twist to the already discussed trusts has already been discussed in these columns. The latter is another kind of a conspiracy both at underground and in the open. In the meantime, unless there is hope of adjusting the differences between the operators and the miners and ending the strike it will be for the miners to seek employment elsewhere or at least to cease their forcible attempt to prevent non-union men from working for the operators. It will doubtless be longer and tedious than any strike in the history of the coal industry in the United States.

The settlement of the strike will not necessarily mean the settlement of the other alleged conspiracy. The litigation is entirely separate and it might be added separately interesting.

## WESTERN MARYLAND

### COAL DEVELOPMENTS

As West Virginia extends to Conneltsville promises to develop additional coal fields judging from the announcement that over its lines will be cut the West Virginia coal destined for Charles M. Schwab's product coke plant at South Bethlehem.

But this is not all. It is stated that the coal fields will build up an extensive trade in coal of no mean proportions. The present export of some \$2,000,000 of coal annually and its increase is one of the plumes of the Western Maryland. The success of this plan means a material increase in Western Maryland's coal tonnage.

The plan is perfectly feasible and we will not doubt its successful fruition. It means the development of a large amount of new coal territory either directly or through its Lake Erie connections.

## ONE OF THE

### DESIRABLE TRUSTS

The proposition of Fayette City Bell Telephone Company and Conneltsville to form a sewage disposal trust will probably be the best combination of interests for the public welfare.

Such combinations will serve to make more economical and effective our sewage disposal plans. If these towns find it profitable to combine in the construction of a single disposal plant sufficient to take their sewage Conneltsville may offer a combination with South Conneltsville. Dunbar Township and possibly Perryopolis and Taylor with interest will give locating the disposal plant at the lowest drainage point. Such a plant on the lower Youghiogheny will take care of the sewage of all the towns and of Scottdale and the Pennsylvania.

## THE DEVIL ON

### THE MOUNTAIN

William Harrison Berry the thirty and obnoxious gubernatorial candidate of the Keystone Party is willing to take a few other nominations for the same office.

Following his old trail he is trying to kidnap the Prohibition nomination but Madison P. Leikin, the non-leak refuses to vacate Madison's consequently declared to be ineligible for the Berry process. Madison is told that the Prohibition campaign committee can get \$5,000 if he will draw from the head of the bucket and permits Berry to be named in his stead and with this money the Water Wagon can be cleared of its load of dirt.

The situation calls forcibly for the story of a certain peasant of a Dutch farm who took Jesus Christ upon a high mountain and made him a small proposition. Satan had the nomination of the Lower Party and he

Connellsville Men are Interested in Washington County Land.

### THE TRUSTEES ARE SELECTED

Cyrus Echard, W. A. Bishop and Jacob Detwiler Will Hold the Land and it is Not to Be Developed at the Present

At a meeting of a number of Washington county coal owners in the office of the Dunlap-Connellsville Coal Company on Friday the holdings of the several owners of the Grinnick tract of land were decided to Cyrus Echard, W. A. Bishop and Jacob Detwiler to be held in trust. Through Mr. Detwiler, a party from Secordale was granted a 60 day option on the holdings at \$300 an acre.

Nearly all of the owners of the tract are Connellsville men. The land was purchased four years ago from the following: Henry Grinnick, 17 acres, T. J. Barnard, 57, Ross Moss, 119. All of the 373 acres lie between the Ellsworth and the Marianna mines of the Pittsburgh Buffalo Coal Company, in Bethlehem township.

As the owners do not intend to operate they considered it desirable to make the deed of trust rather than take out incorporation papers owing to the heavy State tax. By this method the expense and trouble of going to Orphans Court in case of the death of one of the holders is done away with.

Those interested in the coal land are: Cyrus Echard, John F. Davis, Grant Dull, C. F. Bishop, W. A. Bishop, John F. Riss, of Secordale, Emerson Arnold of Vandeventer, George W. Bittmore, Edwin T. and Leroy R. Kessler of Youngwood, Homer C. Davis, Samuel A. Sprague and Charles Collins John A. Kessler, Worth L. L. Wade, H. Marshall, Frank L. Rose, John T. McClure, John Push, estate of Emma Davis, Jacob C. Detwiler and James A. Dunn.

### DRISCOLL MAY COME BACK.

Reported He Will Be Returned in Charge of Connellsville Division.

It is reported that the Superintendent J. J. Driscoll will return to Connellsville in the fall to take charge of the division in the future and to take over the duties of the division before being promoted to Connellsville.

That Western Maryland has nothing to do with the proposed merger of the Baltimore & Ohio and the Chesapeake & Potomac rivers and the fact that the ship is correct. Superintendent Driscoll was in the city on the Connellsville division. He has been in the city for a long time and is well known to the residents of the city.

Mr. Driscoll is a native of the city and has been in the city for a long time. He is a well known man and is well liked by the residents of the city. He is a well known man and is well liked by the residents of the city.

### TANNIC ACID FACTORY

Will Be Located at Jones Mills

On the south side of the city, near the Jones Mills, a tannic acid factory is being planned. The factory is to be built on a large tract of land and is to be one of the largest of its kind in the city.

Most of the stock of the factory is to be made of the best quality of leather and is to be made in the city. The factory is to be one of the largest of its kind in the city.
